## Panic Room

A panic room is a fortified and discreetly concealed space within a residence, designed to provide a secure retreat during emergencies. Constructed with reinforced walls, a robust door, equipped with advanced communication systems and independent ventilation, it offers a sanctuary for occupants in situations of threat or danger, ensuring safety and peace of mind.

- 12" Reinforced Concrete Walls: Engineered to provide unparalleled strength and durability to withstand natural disasters, potential threats or intrusions.
- Fortified Door: fortified to resist forced entry.
- Separate Air Filtration and Ventilation: ensures a continuous supply of clean, breathable air independent of the main household systems, guaranteeing safety during emergencies.
- Tailored to your needs, our custom panic rooms offer personalized security solutions designed exclusively for you.

“Many people use security cameras as a ring of protection but in real time they only report.”

# Control Within

*“Always be prepared without the need to prepare. With the Stonebridge Panic Room”*

- Advanced Communication Equipment: Integrated with state-of-the-art communication devices, enabling seamless contact with emergency services, family members, or security personnel for swift assistance.
- Within the Stonebridge Panic Room you'll have complete access and control over the alarm and camera system.

# Access Control

- **Biometric Access:** During an emergency, authorized individuals can swiftly gain entry using fingerprint or retinal scans, enabling rapid access without the need for keys or cards.
- **Key Cards/Key Fobs:** Designated individuals equipped with access cards or key fobs can quickly unlock the panic room, granting entry to authorized persons such as family members or security personnel.
- **PIN Codes:** In scenarios where biometric or key access is unavailable, a pre-set PIN code can serve as a backup entry method, allowing trusted individuals immediate access.
- **Proximity Readers:** Authorized individuals equipped with access cards or tags can swiftly approach the panic room door. The proximity reader detects the authorized card or tag, initiating an instant authentication process without direct contact.
- **Physical Barriers/Devices:** The panic room is fortified with a heavy-duty door and a retractable steel barrier. Upon successful card detection by the proximity reader, the steel barrier automatically retracts, granting access to the secured area.

# Hidden Within Plain Sight:

Cleverly hidden within your home, the panic room seamlessly blends in, ensuring complete discretion.

## Security Enhancement:

Keeping the panic room hidden reduces the likelihood of its discovery by intruders or threats. If it's easily visible, it becomes a primary target

## Delaying Intrusions:

*Hidden panic rooms buy crucial time. Delay tactics in a panic room create confusion, redirecting attention from its location and buying occupants time to secure themselves while awaiting assistance. .*

## Psychological Advantage:

*Knowing the panic room is hidden can provide a psychological advantage to occupants. It offers a sense of security and control, reducing stress or anxiety during potential threats.*

# Thank You

For choosing Stonebridg for your Panic Room Solutions.
